

From the Vice Chancellor's desk

Dear Students,

Congratulations for successfully completing the part of your course and best wishes for the ensuing academic session 2016-17 in Madan Mohan Malaviya University of Technology.

At the outset, I wish to thank all students for their participation and support in successful execution of all efforts made to enhance the quality of education in this University through teaching – learning processes embedded with high ethical values. Today, the University has established a new framework for its academic system with special focus on continuous evaluation alongwith commitment, punctuality and accountability in teaching, transparency in examination & evaluation.

University has completed five semesters of its existence and is trying hard to strengthen it on all fronts namely teaching-learning system, human resource and infrastructure within the given constraints. The new academic system needs your much more proactive involvement as compared to older system in terms of time scheduling, theory / laboratory classes, tutorials and continuous evaluation with objectivity and fairness. Although, the University is committed for providing essential inputs through classroom / laboratory / campus wide interactions, but the targets cannot be met unless students participate whole heartedly for seeking guidance from teachers & staff and use the facilities for getting prepared for self initiated learning. Today, reasonable emphasis is being laid on enriching other capabilities as well through audit courses, NCC, NSS, games / sports and extracurricular activities. New evaluation system of General Proficiency has created compelling circumstances for the students to come out of their inhibitions and participate in various extracurricular activities of technical and non-technical nature for their personality development. There has been significant addition in the number of regular teachers in all Departments and I am confident that with active participation of students and their timely feedback, the teaching quality will further improve in due course. The availability of some additional infrastructure equipped with ICT facilities will definitely help in better engagement of students with their mentors and learning resources, provided the students come forward for exploiting them.

In view of fast changing expectations from technical professionals, I wish to call upon the students for putting in their best on few capabilities listed below along with excellence in routine academic activities through the infrastructure and human resource available in University.

- To be able to communicate effectively and improve essential skills for achieving your goal.
- To be able to undertake challenges other than to memorize and reproduce what is taught.
- To be able to write and complete projects, analyze case studies, give presentations, exhibit abilities to think, question, innovate, research, and make decisions based on the findings.
- To be more creative, able to analyze and synthesize facts and information.
- To be able to plan activities, organize tasks, work in a team, be entrepreneurial to innovate, propose solutions to problems and market solutions.
- To be concerned and have positive attitude with scientific temperament for sustainability.

I am confident that the self learning initiatives taken by the students and University's efforts through new academic system as per global expectations from higher technical education, availability of good quality teachers and requisite infrastructure facilities will definitely help in your holistic development as a successful professional in this lush green serene campus.

With Best Wishes.

Prof. Onkar Singh
Vice Chancellor

M.M.M. University of Technology, Gorakhpur
