

Message from Vice Chancellor

Dear Faculty Members, Officers and Staff Members of the University

Seasons greetings!

Heartiest felicitations on successful completion of two years since this Institution started its operation as a non-affiliating, teaching and research University in 2013. I gratefully acknowledge the support of all faculty members, officers, staff members and students in our sincere efforts to create a technical University with strong foundation for imparting good quality technical education with high ethical and moral values. It is worth appreciating that the University has completely redefined its academic processes and successfully implemented choice based credit system with special focus on continuous evaluation and brought in complete transparency and high quality in teaching, examination and evaluation system.

Since 17th December, 2013, I have been constantly endeavouring to overcome weaknesses of infrastructure and human resource along with the creation of new framework for the smooth transformation and functioning of this Institution as University and accepted the challenges inherited to it by erstwhile college. Academic processes, teaching human resource and infrastructure has been strengthened to the extent possible.

After timely completion of odd semester 2015-16, on the commencement of even semester of current academic session, I take this opportunity to call upon the faculty and staff members for further strengthening of the teaching – learning processes and for improving the overall quality of education. In view of stiff competition amongst higher technical education institutions for achieving excellence, it has become inevitable for the academic and administrative set up of the University to understand the need of hour and work aggressively for ,

- quality enrichment of teaching in classrooms so as to make them meaningful and embedding it with project based learning.*

Contd..

- exposing students to technological advancements in respective area through teaching of the content beyond syllabus, industrial visits, inviting working professionals for expert talks and other relevant initiatives as deemed necessary.
- improving quality of laboratory to strengthen the experiment based learning.
- introducing new audit & core subjects for all round professional development of students
- improving behavioural and communication skills of students for better employability.
- strengthening relations with industry by exploiting creativity of students, teachers, staff and officers.
- taking up the need based / innovative projects of social/industrial relevance.
- providing suitable ambience for self learning amongst the students.
- improving quality of research at post graduate level for good publications and good quality research output and IPRs.
- strengthening communication between teachers and students.
- recognition of accomplishments and encouragement of the students, teachers, officers and staff members of University.
- strengthening interaction with alumni for benefit of University.
- improving the externally funded research in the University.
- strengthening the infrastructure as per present requirements.

In the present era of knowledge driven economy, I wish the faculty members, officers, staff and students to continue putting their endeavour for improving the routine teaching and research activities and adapt the best practices of technical education for improving the academic standard of University.

With Best Wishes.

*Prof. Onkar Singh
Vice Chancellor
M.M.M. University of Technology
Gorakhpur*
